

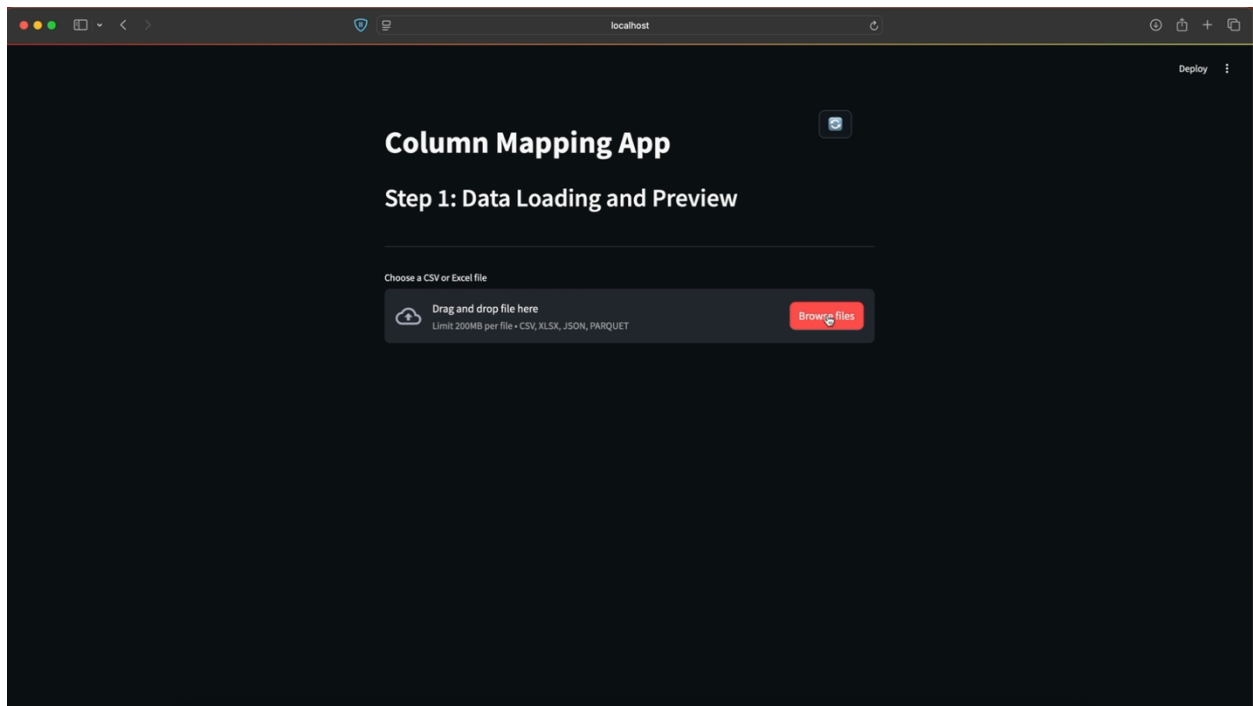

Mapping Agent Tutorial

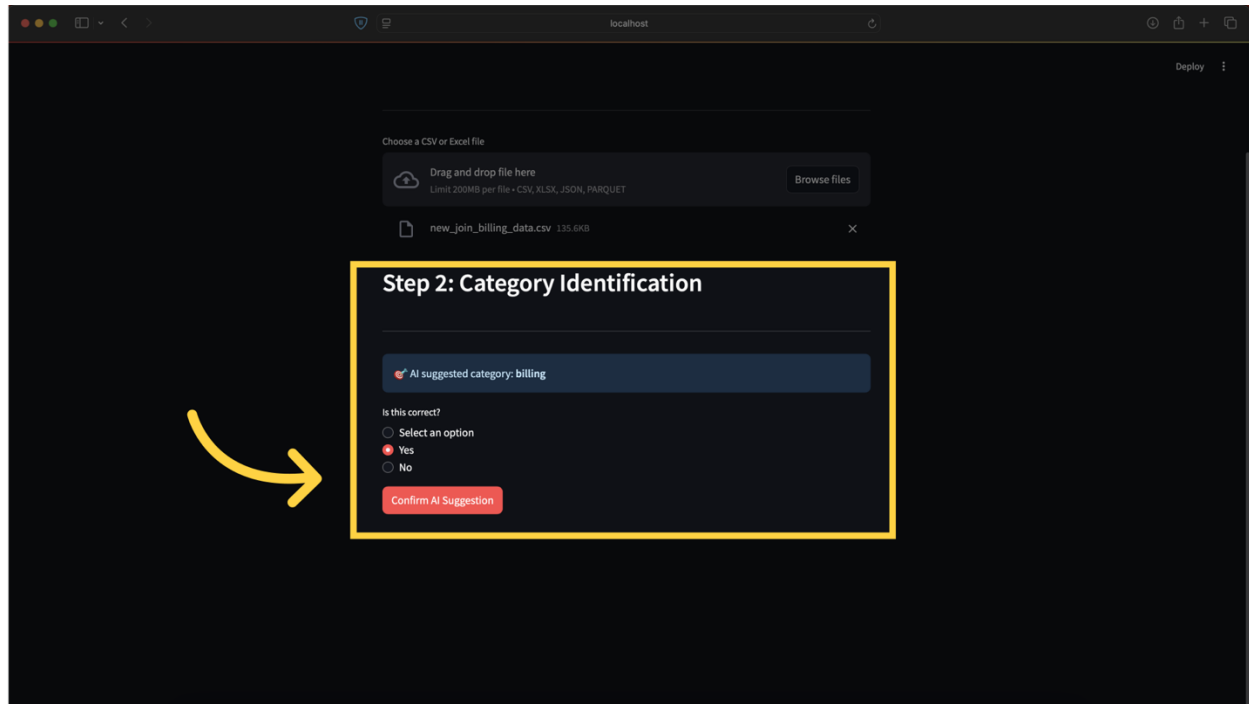

1. Introduction

The Mapping agent will transform your proprietary data into a format allows other agents to derive semantic understanding. Begin the by uploading your dataset.

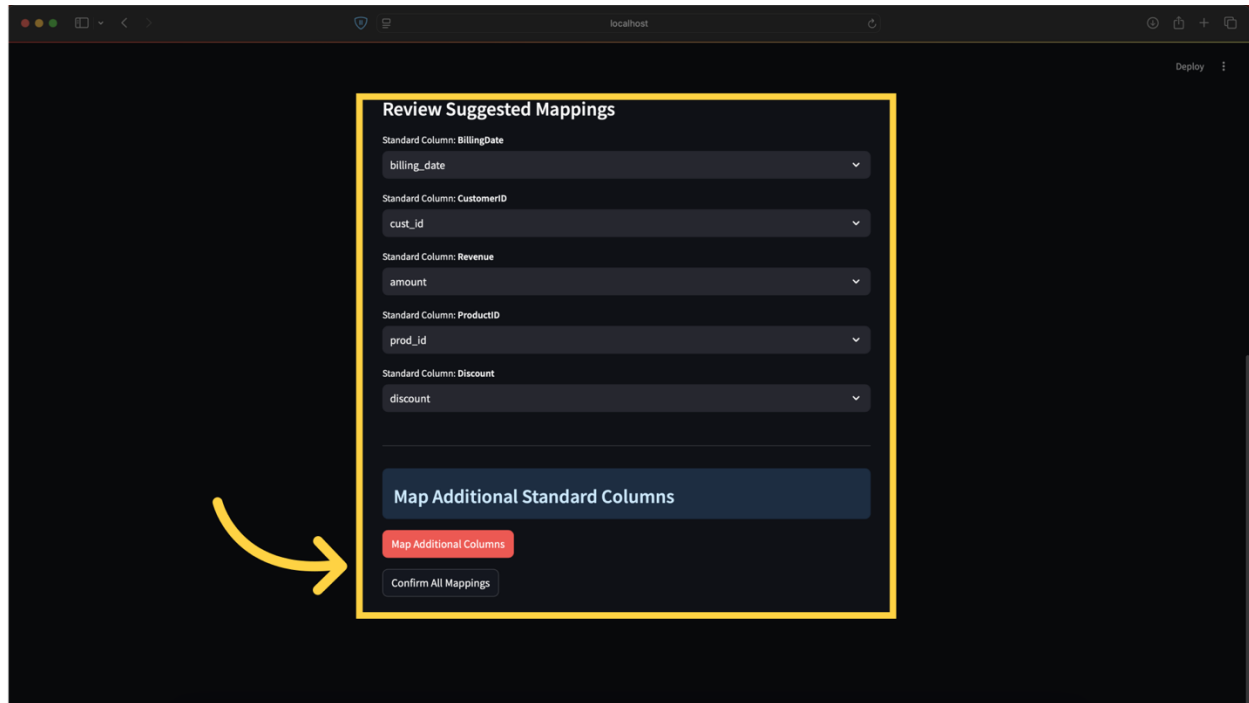

2. Category Identification

The Mapping agent assigns a category that will assist in determining the semantic types assigned to your data's columns. If you agree with the data categorization, you can confirm it. If not, you can choose No to manually choose a category (billing, support, or usage) for the data you uploaded.

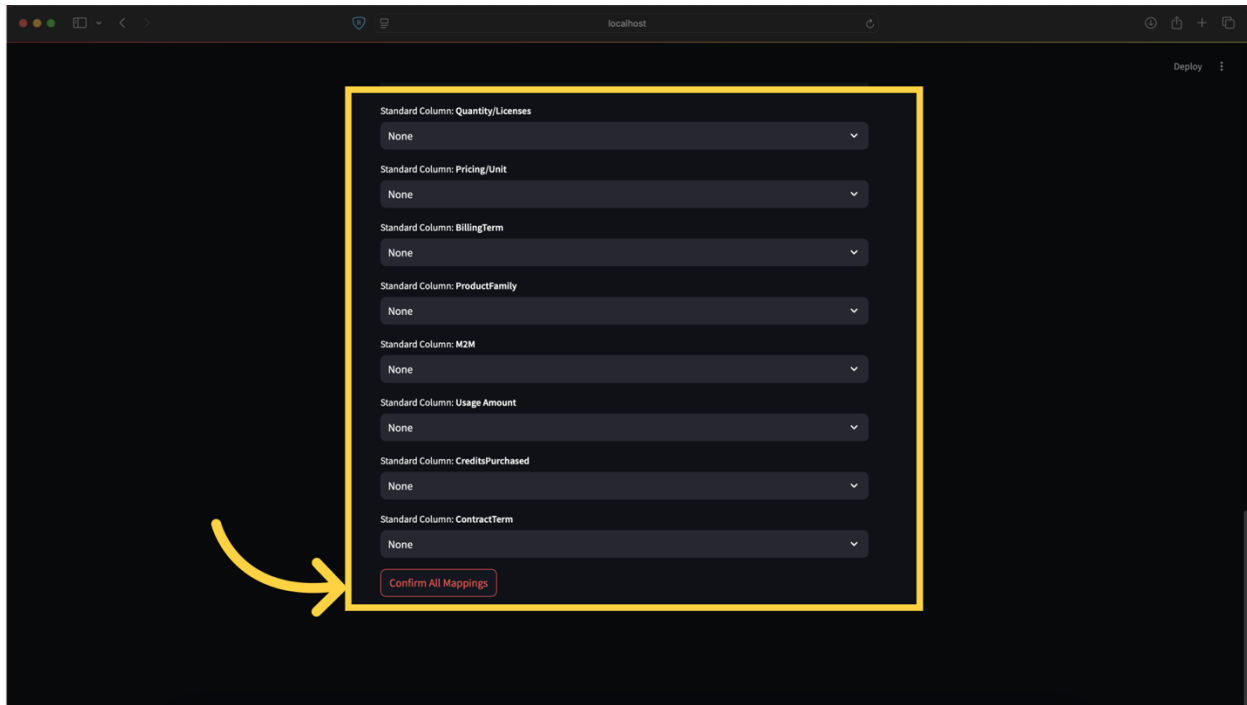

3. Suggested Column Mappings

After confirming a category for your data, the Mapping agent will then present you with a list of columns from your data that it has mapped to its internal schema. There are some mandatory columns that must be mapped before you can proceed (denoted by #). If you want to change an individual column mapping, select an option from the respective column's dropdown. If there are additional optional mappings you would like to make, click on the Map Additional Columns button.

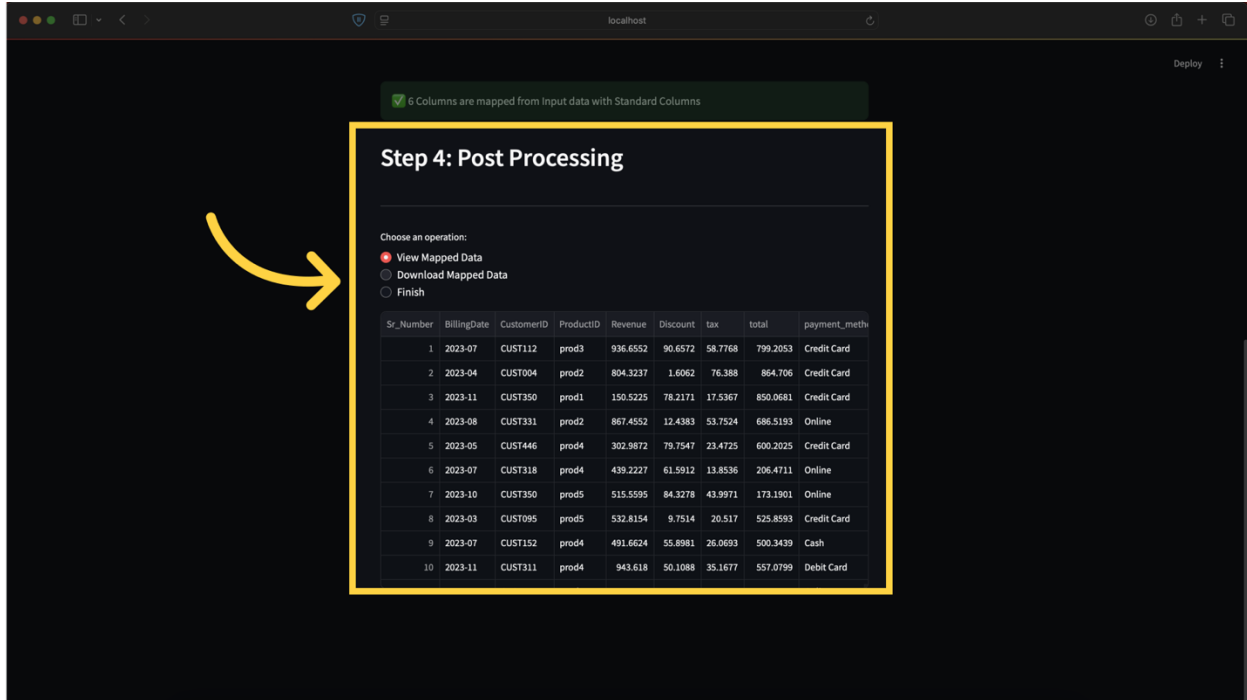

4. Optional: Additional Mappings

Here, you can assign columns that have not been mapped earlier to the rest of the headers in the internal schema. Once you are satisfied with the column assignments, press Confirm All Mappings to lock them in.

5. Final

Here, you can download your data, and you have finished mapping your data!

6 Columns are mapped from Input data with Standard Columns

Step 4: Post Processing

Choose an operation:

- ☒ View Mapped Data
- ☐ Download Mapped Data
- ☐ Finish
